## Access **Game-Winning** Features

### Deadly Bone Aimbots

Aim Key **Right Mouse**

Visibility Checks ☒ ☐

FOV

Bone Prioritization

Smoothing

Aim Prediction ☒ ☐

You're immediately ready to start dominating in games featuring Wallhax's deadly bone aimbot. Our standard hack setting are designed to **put you at the top of the scoreboard** and keep you there.

Get **headshot after headshot** or swap between targets in a **matter of milliseconds** to minimize your time to kill and make every bullet count. Take down entire squads of opponents or grind through mobs faster than ever.

Adjust your aimbot settings as you like from our **in-game, mouse driven menu**, with options like **bone prioritization**, **aim prediction**, **stick-to-target** and more. Humanization settings like **custom field of view** and **smoothing** keep you looking 'legit' if you want to.

### 3D ESP Vision

Fully customizable 3D ESP gives you the always-on advantage you can use to outplay your opponents in every game we offer. Track your opponent's exact moves with features like **3D Box ESP** making it easy to infer their exact position in 3D space, while others like **Nametag ESP** let you hunt down a particular player.

Our **Healthbar ESP** lets you know which enemies are weakest and should be prioritized first, while **traceline ESP** makes it easy to see exactly where an opponent is aiming at any given time.

In our cheats with multiple ESP types like items or lootable objects that include it, use our **ESP filters to hide low value items** and distance filters to reduce the amount of ESP on screen, helping you to focus on the most valuable and important resources or targets.
